Sony str-dn1050 specifications

>> data-hide>> Sony STR-DN1050: The official marketing text of Sony STR-DN1050 as supplied by the manufacturer Amazing sound from any source. Enjoy superior sound while easily steaming music with built-in Wi-Fi, Bluetooth& AirPlay. With 7.2 channels & 165 watts of power, driven by the largest capacitors and transformer in its class, it's legendary Sony sound that really connects. Featuring 4K resolution pass-through and upscaling, high-res audio compatibility, 10 HD inputs and support for 2 separate powered zones, this receiver is the ultimate high resolution sound stage for your music, Blu-ray movies, games and more. Built for sound. Borrowing construction and circuitry design cues from our ES line, it all begins with a rigid chassis based on the legendary frame and beam concept. To this structure, we then mount the various components: a high capacity power transformer, custom heat sink, and other specially selected audio-grade components that together add up to class-leading sound quality. For purists, Pure Direct mode preserves signal clarity and detail by switching off unnecessary signal processing circuitry to provide the cleanest possible signal path with minimized electronic interference. Sweet Sound. The STR-DN1050 packs the best Sony Music and Sony Pictures audio technologies in addition to being powerful enough to deliver impressive multi-channel sound performance (165W x 7 @ 6 ohms, 1 kHz, 0.9% THD). It even supports High-Resolution file playback (up to DSD 2.8) via your home network, HDMI-connectivity, and a conveniently mounted front USB2. 2nd zone connectivity and control. Easily expand your Audio/Video experience beyond the living room with flexible 2nd zone connectivity and control. Featuring a dedicated 2nd zone HDMI output, IR repeater, and both amplified and line-level audio connectivity, all audio/video sources (including network services, Bluetooth-connected devices and USB) connected to the STR-DN1050 can be independently controlled and output from the Main Zone to a second zone. Wi-Fi built-in. Wirelessly connect to your home network and via the integrated DLNA support access music stored on: your computer, network storage device, or even your smartphone. Via built-in music service support13, you can access and enjoy music streaming at its very best-the latest from Pandora, Spotify, Music Unlimited, and tunein. Also AirPlaycompatible, you can easily stream your music and music apps from your iPhone/iPod/ iPad or iTunes. Connect it all with Bluetooth. The STR-DN1050 receiver effortlessly streams music from your smartphone or tablet so nothing is out of reach. Now anyone can be the DJ-no wires, no problem. Bluetooth streaming can even wake the receiver from standby mode to get the party started. Built-in AAC and aptX codec support avoids signal quality loss when streaming music wirelessly. Well connected. Enjoy versatile HD connectivity with six HDMI inputs (5 in back, 1 in front - up to 4K capable) and connect a Sony PlayStation entertainment system, Blu-ray Discplayer, or any other HDMI-capable devices4. Two supplied analog component inputs provide connectivity to legacy devices (1080/60i capable). Via MHL (Mobile High-Definition Link), easily connect a smartphone and enjoy video clips, music, and more on the big screen complete with big sound4. A front-mounted USB input even allows for easy connectivity and charging of compatible devices2. Life less complicated. The STR-DN1050 receiver effortlessly streams music from your smartphone or tablet so nothing is out of reach. Now anyone can be the DJ-no wires, no problem. Bluetooth streaming can even wake the receiver from standby mode to get the party started. Built-in AAC and aptX codec support avoids signal quality loss when streaming music wirelessly. Easy setup, optimized use... Proper system setup and optimization shouldn't be an ordeal. Easy Setup using the simplified remote in conjunction with an intuitive, on-screen interface, leverages the power of Digital Cinema Auto Calibration (D.C.A.C.) and a supplied microphone to optimize settings based upon room characteristics and speaker distance and placement. Advanced on-screen display. Class-leading performance demands a powerful user experience. Via an advanced on-screen user interface, the STR-DN1050 affords comprehensive system control, settings adjustment, input selection, and the like with seamless visual confirmation on your TV screen. Handy remote control. Easily and intuitively control the receiver via SongPal and your Bluetooth-enabled smartphone. Simply download the free SongPal app from iTunes or Google Play Store, install it on your smart device and take control of your receiver and your favorite movie and music content, including receiver settings, media metadata, and more - all through one Short summary description Sony STR-DN1050: This short summary of the Sony STR-DN1050 data-sheet is auto-generated and uses the product title and the first six key specs. Sony STR-DN1050, 7.2 channels, Surround, 6.3 mm, Clamp terminals, AAC,AIFF,CBR,FLAC,MP3,PCM,WAV,WMA, 2.1+EDR Long summary description Sony STR-DN1050: This is an auto-generated long summary of Sony STR-DN1050 based on the first three specs of the first five spec groups. Sony STR-DN1050. Audio output channels: 7.2 channels. Receiver type: Surround. Headphone connectivity: 6.3 mm. Speakers connectivity type: Clamp terminals. We have put the 7.2 home theater control center to a critical test. Sound Quality - 94% Features - 92% Ease of Use - 95% Build Quality - 88% SUMMARY The STR-DN1050 is a modern 7.2 AV receiver with great features and awesome sound with both music and movies. PLUS Big, dynamic and detailed sound. Very easy to use. Plenty of features. MINUS Can sound a bit bright and strained at high volumes. With the STR-DN1050 Sony aims to please the demanding home theater and music enthusiasts who want cutting edge technology and value high-quality reproduction of sound and images. Visually it looks like its predecessor, STR-DN1040, with its tidy front of brushed metal and neatly placed flat buttons below the display area that runs across the entire width of the receiver. It only comes in black and has a listed price of \$599.99 according to Sony's website, but you can of course find it at a reduced price online and the lowest price I've found was, as in most cases, on Amazon. The STR-DN1050 can deal with all kinds of media formats and devices and is equipped with a HDMI interface of the latest generation, enabling it to pass through Ultra-HD signals as well as scale up lower resolution videos. LAN, WLAN and Bluetooth with aptX is also on board, and thanks to NFC (Near Field Communication), the Sony AV receiver quickly get in touch with NFC-enabled Android devices. With USB and the Network connected to the 7-channel amplifier, high-resolution audio formats like WAV and FLAC (192 kHz/24 bit) can be played with no loss. In addition, the STR-DN1050 even handles DSD format (DSDFIF 2.8 MHz, 2.8 MHz DSF), which was originally developed for the SACD and now, free from the physical optical disk, has made a bit of a comeback.Six HDMI 2.0 inputs - two with MHL compatibility - can be found on the Sony receiver. On the output side you'll find three HDMI interfaces, one of which is ARC-compatible.The interiors of the STR-DN1050 is sitting in a sturdy metal case and is built around a printed circuit board made of glass-epoxy resin, has a generously dimensioned power transformer and here and there you'll find handpicked components to make it sound better than its predecessor. The first time the STR-DN1050 is turned on, a clearly structured quick setup guide takes the user by the hand. This enables even home theater novices to make the AV receiver operate successfully. The 7.2-receiver can be configured in a 7.2 setup, and besides the usual front, center and rear speakers you'll also find "Surround Back Speaker" or "Front High Speakers". Alternatively, if a classic 5.1 setup is connected the remaining channels can be used for a second listening area. The connected loudspeakers are measured automatically and very reliably by using the "Advanced DCAC" (Digital Cinema Auto Calibration). The setup microphone is required for this and is, of course, included.A special feature of the AV receiver can be found under the menu item "Center Speaker Lift Up". This makes the center speaker, which in most cases is positioned below a TV or a screen, move acoustically upwards to create the illusion that the sound originates in the middle of the TV or screen. Ten levels/steps can be selected to find the proper 'height', but only works if front high speakers are connected.The newly designed menu works well and all the required information is visible with symbols and clear labels.The 'SongPal' app, which is available for free from the App Store or Google Play Store, can be used to control the receiver using Bluetooth. It's an easy way to select the desired source, to control the first and second listening zone independently, as well as access USB or network content. Various music services like TuneIn Radio, Spotify, Deezer or Sony's proprietary Sony Entertainment Network can be managed by STR-DN1050 and selected to entertain the user. With the STR-DN1050 set up and calibrated in our listening it scored well in stereo mode with a very neutral sound and a wealth of fine details, making it possible to enjoy music in all its facets ans flavors, and the rich, precise bass gave it a stable foundation. Multi-channel sounded equally convincing with a punchy sound, and movies were presented with a vast amount of detail that made it an enthralling experience.With scenes from favorites like 'Star Wars' and 'The Lord of the Rings' we sat nailed to our seats as the Sony pulled out all the stops and burned off a magnificent effects firework, with special effects that are to the point while also bringing our listening room to quake. I'm pretty sure this is the receiver Darth Vader has in his man cave...More subtle scenes where presented with the calm and ease as one would expect from a receiver of this caliber, and we were often struck by how the 1050 presented details and gave us a sense of space that you'd miss out on with a lot of lesser receivers.Overall, the STR-DN1050 is a remarkable little beast when it comes to pure 'sound per pound', but we must mention that it can turn a bit hard and bright if you crank up the volume too much. This 'character' will of course be extra prominent if you already have bright sounding speakers. STR-DN1050 passed through our measurements with no major abnormalities. Our crude measuring method did not allow us to determine any reliable values for the 2-channel stereo power measurements at 4-ohm loads on this receiver, so we have to ignore them for this review. However, at 8 ohms it was convincing with 110 watts of stereo power and a 78 watts load with five channels. The distortion measurements and the amount of crosstalk, noise and the damping factor show that the Sony engineers have done their homework very well. In standby mode, the AV receiver idles at a low consumption of 0.1 watts. 7.2 Ch. 1155W AV Receiver (165 W x 7 @ 6 ohms, 1 kHz, THD 0.9%)Built-in Wi-Fi® with DLNA and Airplay® capabilityFlexible HDMI® connectivity with 6 inputs and 3 outputsEnhanced usability via rich GUI and streamlined remoteSupports high-resolution file (incl.
